Magdalena Salinas

Argentinian architect, artist and researcher. My work oscilates architecture, landscape, and material ecologies. I explore how spatial design can contribute to environmental justice and the imagination of regenerative futures. With a cross disciplinary background in visual arts and landscape architecture, I develop projects that combine spatial research, critical thinkin, visual narratives, and prototyping processes.

My practice is currently expanding from traditional architecture toward an exploration of material ecology and artistic research.

Research

2024-2025 With Salt it Hurts , With Salt it Heals

1st price Archiptix 2026. Award winning Stipend tot Steun 2025

Research and design project examining lithium extraction in Argentina's Lithium Triangle through the lens of salt as environmental residue, territorial archive, and architectural material. Combines fieldwork, photography, mapping, publication, film, and material experimentation.

2023-2024 A House of Salt,

Exhibited in DDW 2024, MDW 2025

Speculative design. Artistic and architectural investigation into human impermanence, entropy, and material degradation through salt-based architecture.

2023-2024 Nor Dock

2017 Exhibited and Published in the International Biennale of Architecture of Buenos Aires 2018

Speculative urban and landscape project for the Luján River waterfront exploring the intersection of port infrastructure, public space, and the visibility of productive landscapes.

2025-2026 Salt Matters

Canvas phase funded by Stimulering Funds NL.

Research project developed in collaboration with SEA WATER (NL) and sociologist Rowan Stol. Investigates desalination by-products as ecological and spatial resources within Dutch coastal infrastructures
